### ✓ BAFE SP203-4 Accredited

The scheme recognises the importance of providing highly skilled, trained and competent engineering teams complete with a

polished data recording process to ensure Emergency Lighting systems are maintained to the highest standards.

### Maintenance of Emergency Lighting systems to BS5266

Safe I.S. Ltd provide service contracts to test and maintain all types of emergency lighting systems to BS5266.

Emergency lighting is required in both commercial and residential developments to provide suitable illumination to facilitate escape in the event of a power failure, if it fails to operate correctly it could leave you in the dark.

### What is Emergency Lighting?

Emergency lighting could be seen as one of the most important systems put in place to protect people in your property. It is installed to illuminate high traffic or risk areas in the event of a power cut (such as escape routes, high-risk areas, signage and fire safety equipment).

In the event of a power cut, the emergency lighting is designed to automatically illuminate ensuring these at-risk areas are well illuminated allowing evacuation of the building and Safe I.S. service offerings ensure they work as and when

Keeping the building occupants safe is obviously a high priority, so in an emergency, we make sure that you have an emergency lighting system that will not fail by regularly maintaining your systems in compliance with BS5266.
